EQUIPMENT WE BRING TO YOUR HOME

When you need help, Eco Water Restoration is here to make sure we properly salvage, mitigate, and repair your home back to its original state. We understand the stress a homeowner goes through when it comes to Water Damage, Fire Damage, Mold Damage, or Storm Damage. When we come to your home, we employ proven processes and the latest high tech equipment to get the job done right.

MOISTURE METER

A moisture meter measures the moisture levels or moisture content of a material, helping us find leaks not visible to the eye.

DECONTAMINATION CLEANERS

After a controlled demolition, cleaning and decontamination are a must before the drying process begins. We use a safe botanical disinfectant that kills over 99% of bacteria..

DEHUMIDIFIER

Dehumidifiers speed up the process of removing moisture from the air. Once moisture from a material starts to evaporate, the dehumidifier pulls the moisture out of the air quickly.

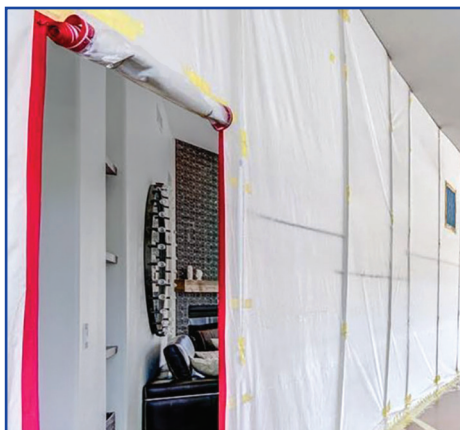

HEPA AIR SCRUBBER (AFD)

Air scrubbers are designed to remove airborne contaminants from the air. AFD's have a series of filters that trap dust, mold, smoke and odors plus a HEPA filter.

AIR MOVERS

Air movers are used to circulate air throughout the work space to ensure drier air is continually displacing the evaporation moisture at the surface of wet or damp materials.

CONTAINMENT BARRIERS

We set up an engineered control space to isolate the affected area for efficient drying and/or to minimize cross contamination to unaffected areas.
